

Life Science SaaS Products and Consulting Services

CommandBridge™

Program Management SaaS for Life Sciences

The Life Sciences industry bears complex, cross-functional processes and regulatory (GxP) oversight across Research & Development, Commercial & Enterprise functions. Most organizations struggle to establish a framework that enables consistent project planning & management standards that provide leaders the insights needed to drive decision-making and keep programs in track, all without administrative burden. Problem solved!

The CommandBridge™ Software as a Service (SaaS) solution leverages automation to eliminate shuffling PowerPoint and Excel documents and delivers role-based dashboards providing insights into status, risks, dependencies, change control and more.

Introducing CommandBridge™

Program Management SaaS for Life Sciences

Built on Smartsheet.com

- Stability. 10M users world-wide
- Compliance. HIPAA, ISO, SOC compliant
- Globally scalable for any size organization

Features:

- Role-based dashboards & insights
Portfolio, Program, Department, Project, User
- Automated Business rules
- Workflow routines. (Alerts & Approvals)
- Role-Based Access & security

Used By

- Project / Program / Portfolio Managers
- Executives and Department Leaders
- Vendors

Used for

- Portfolio, Program & Project Planning
 - Annual Budget planning
 - Business case preparation
 - Project Approval & Contract Mgt.
- Portfolio, Program & Project Management
 - Status reporting & Alerts
 - Risk Mitigation & Management
 - Change Control Management

How does the industry address their needs today? Many use PowerPoint & Excel. This method is an enormously time consuming and provides no framework for insights across projects. Others use project management tools like Smartsheet, Asana or Monday. These tools alone don't impose consistency or standards across projects, and again lack the ability to deliver insights across projects.

Only CommandBridge™ provides for consistent management of portfolios & programs like:

- Product Launch Programs
- Information Technology
- Clinical Asset Development
- Commercial Operations
- Brand & Omnichannel Orchestration
- Medical Operations

Uses	Benefits	How are benefits achieved?
• Budget Planning • Business Cases • Project Approval	Risk Mitigation 	• Planning & Preparation Map out annual budgets, prepare business cases, recognize dependencies and contract with efficiency. • Manage Dependencies & Risks proactively Track & Prioritize Risks and escalate to leadership dashboards for awareness and decision support.
• Contract Management • Project Management • Program Management • Portfolio Management	Productivity 	• Consistency Uniform process, lexicon & metrics across project portfolios, departments & vendors. • Transparency Centralized, Real-time access to user-specific dashboards & analytics from anywhere. • Automation & Optimization Reduce administrative burden of collecting & assimilating status updates and preparing status reports.

For a secure, stable, scalable solution to help your PMO reduce risk and drive productivity, **BridgeView Life Sciences** has the team, tools, and expertise to implement processes, technology, and staff to get your operations running smoothly.
